8 c The width is the diameter of the circle

$$\text{so } A = \frac{\pi}{4}(2r)^2 = \pi r^2$$

Challenge

log x	0	0.30	0.48	0.60
log y	0.72	0.67	0.63	0.58

The relationship between log x and log y is not linear so the relationship is perhaps $y = ax^n$

x	1	2	3	4
log y	0.72	0.67	0.63	0.58

The second graph, log y against x, is a linear relationship so the relationship is of the form $y = ab^x$.

$$\begin{aligned} \log y &= \log(ab^x) \\ \log y &= \log a + \log b^x \\ \log y &= \log a + x \log b \\ \text{Intercept} &= 0.75 \\ \log a &= 0.75 \\ a &= 10^{0.75} = 5.8 \end{aligned}$$

$$\text{Gradient} = \frac{0.58 - 0.72}{4 - 1} = -\frac{0.14}{3} = -0.04666\dots$$

Challenge

$$\begin{aligned} \log b &= -0.04666\dots \\ b &= 10^{-0.04666\dots} \\ &= 0.90 \end{aligned}$$

So the formula is $y = 5.8 \times 0.9^x$
